### Description

This moyogi-style bonsai is a specimen over 50 years old. Its impressive features include a height of 870 mm and a width of 700 mm.

The high-quality non-enamelled pottery measures 470\*345\*130 mm, while the trunk's diameter at its base is 140 mm.

The nebari extends 280 mm, adding to the overall aesthetics of the tree.

The needles of this tree are short and slightly bluish, creating a unique visual appeal. Its mature bark is quite beautiful, and its well-formed trays add to its charm. The conicity of the trunk is remarkable, without any significant wounds from cutting or wiring.

The root base is also well-developed, contributing to the tree's vitality.

Originating from the Me SHIINO KENTARO nursery, this bonsai tree underwent wiring, cutting, and shaping in February 2020 by Koji Hiramatsu in Japan.

For passionate collectors, this tree represents a valuable addition to any bonsai collection.

Please note that the stand is not included.

This splendid specimen was photographed in October 2024, capturing its beauty at this particular stage of its development. Structural cutting planned for this winter in 2023 and the possible use of wiring will further enhance the natural beauty of this bonsai.
